

One of the largest base isolated hospitals constructed in the United States—able to glide 30 inches in every direction during a seismic event

**Project:** Zuckerberg San Francisco General Hospital and Trauma Center

**Architect:** Fong & Chan Architects

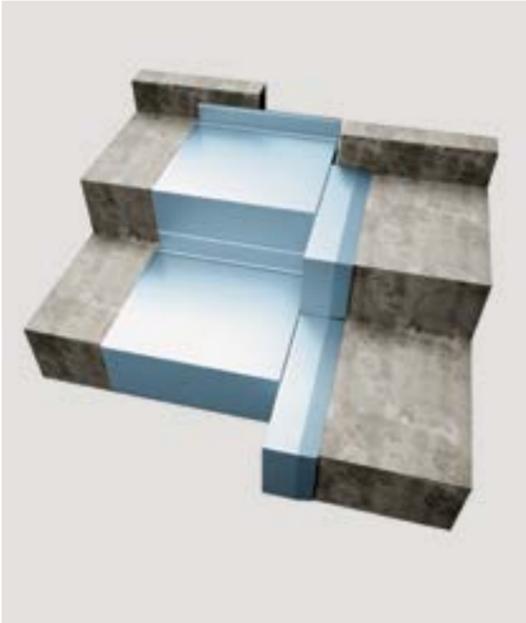

**Products:** MACC Multi-Axial Corridor Cover System, MARC Roof Covers, SSRW Seismic Moat Covers, XLSC Exterior Wall Covers

The Zuckerberg San Francisco General Hospital and Trauma Center serves more than 100,000 patients annually. Located on the San Andreas fault line, California building code mandates strict seismic standards for new construction. Collaboration with CS made it possible for “The General” to be able to glide 30 inches in every direction during a seismic event. CS’ Multi-Axial Corridor Cover (MACC) system seamlessly connects the new hospital tower to the existing structure while the exterior moat covers visually unite the landscape and sidewalk with the structure.

Construction Specialties, Inc. holds a patent(s) on one or more of the products listed herein. For detailed patent information, see [www.csgroup.com/patents](http://www.csgroup.com/patents).

From the initial concept sketch only CS can design and test a custom cover to meet your project's requirements.

CS has been helping architects solve complex building movement problems for over 45 years. We understand that every project has its own special movement criteria, and that one of our standard designs may not be right for your project. We have a team of technical experts that can work with you to design a custom cover that meets your project's specific requirements. We can show you in person how your expansion joint cover will function and operate under real-life conditions with our exclusive full-scale test chamber, which has evaluated some of the industry's largest joint covers.

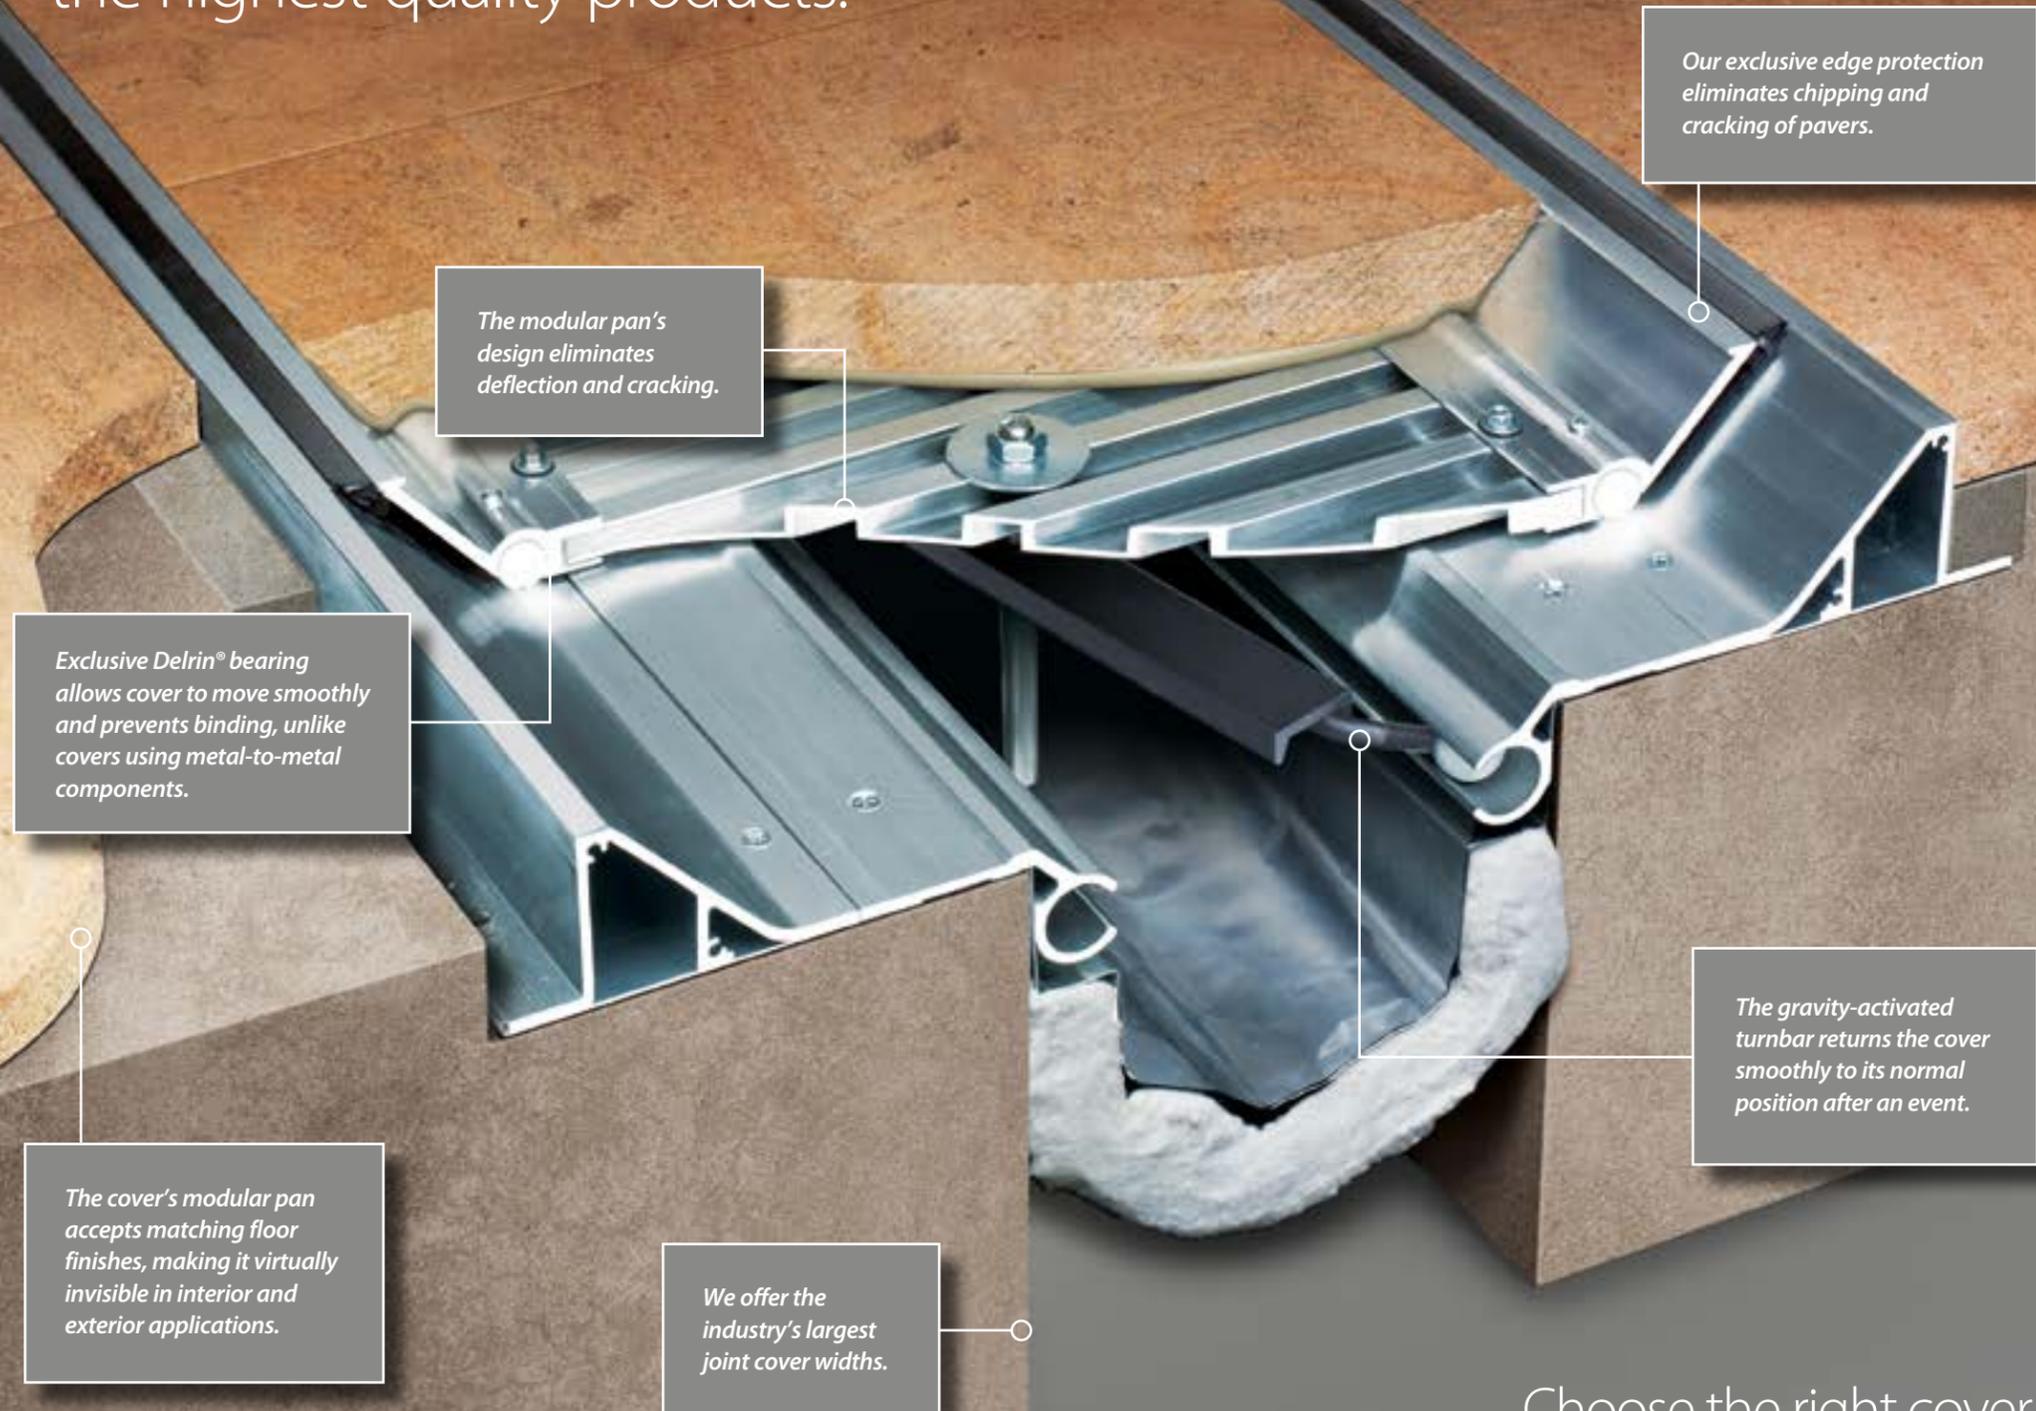

**Project:** California Memorial Stadium  
**Architect:** HNTB Architects & STUDIOS Architecture  
**Product:** Customized Seismic Stair System

Located directly over the Hayward Fault, California Memorial Stadium was the first facility to require 12" expansion, compression and lateral movement. In less than 21 months, we designed, tested and fabricated the custom joint cover assemblies for six seismic joint openings around the stadium bowl. These custom stair risers and treads throughout the stadium help reduce seismic risk and ensure life safety in a major seismic event.

THE CS DIFFERENCE

We pride ourselves on delivering the highest quality products.

*The modular pan's design eliminates deflection and cracking.*

*Our exclusive edge protection eliminates chipping and cracking of pavers.*

*Exclusive Delrin® bearing allows cover to move smoothly and prevents binding, unlike covers using metal-to-metal components.*

*The cover's modular pan accepts matching floor finishes, making it virtually invisible in interior and exterior applications.*

*We offer the industry's largest joint cover widths.*

*The gravity-activated turnbar returns the cover smoothly to its normal position after an event.*

Choose the right cover.  
Choose CS.

**LAF INTERIOR WALL COVER**

Multi-directional seismic forces can create havoc with conventional turnbars, especially in wall covers. This wall cover system was designed to disengage during a seismic event, but remain tethered to prevent falling, while protecting the surrounding finishes from damage.

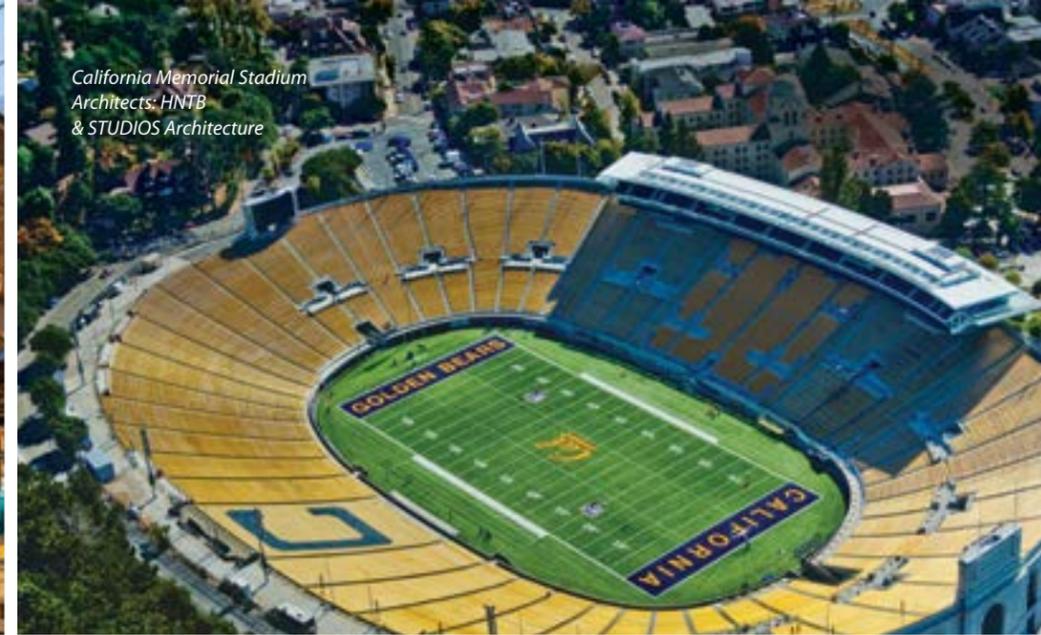

**XLS EXTERIOR WALL COVER**

Designed to conceal large seismic joints, the key to this exclusive cover features an innovative gravity closing system that automatically resets the cover after a seismic event. The cover can receive a wide variety of cladding systems including metal, glass and stone.

SJPFM and SJPFW have the same model data. For odd and larger sized joints, call 800.233.8493 or visit [www.c-sgroup.com/ejc](http://www.c-sgroup.com/ejc).

For comprehensive information on these products, visit [www.c-sgroup.com/ejc](http://www.c-sgroup.com/ejc).

# Seismic Corridor Covers for Base Isolated Structures

Because base isolated structures are free to move in any direction, they create distinct challenges for the design of the seismic joint covers. Our solution is an integrated assembly where floor, wall and ceiling covers are connected and move in unison. The MACC System, or cab assembly, provides multi-directional movement of up to 100% in four directions. The floor cover may be used independently of the wall and ceiling covers for lineal applications where lateral shear is a problem. (Specify model XYZ.)

## COVER DETAILS

Unique honeycomb structure supports the plate throughout movement cycle.

Product also available as a conventional lineal cover, model XYZ.

Typical Floor Section

Floor/Wall Section

- OSHPD-approved designs
- Complies with ASTM E1399
- Complimentary pre-construction design assistance
- Fire rating available; compliant with UL 2079
- Wide range of custom finishes available
- Virtually any joint size/movement capability can be accommodated.

## HOW THE MACC SYSTEM WORKS

**Full Open (During Tension)** During an event, the MACC system slides out fully in the expansion (or tension) mode.

**Full Closed (During Compression)** During an event, the MACC system slides fully into the adjoining structure in the contraction (or compression) mode.

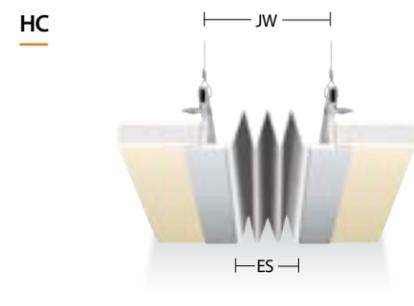

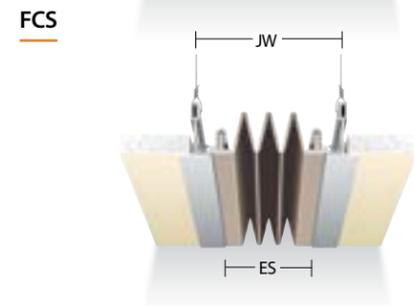

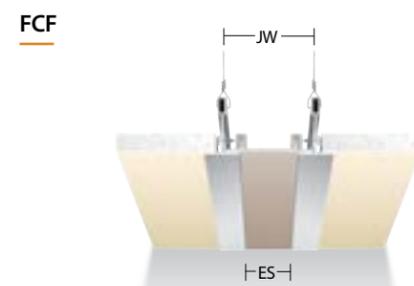

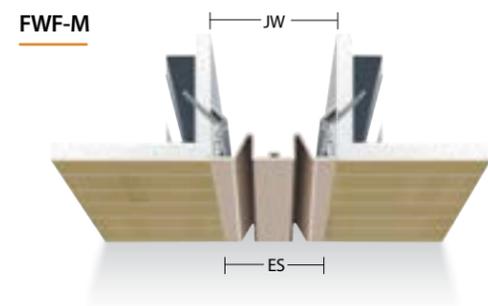

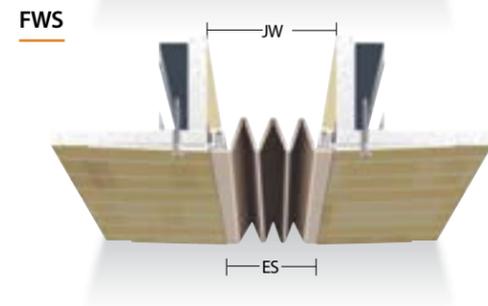

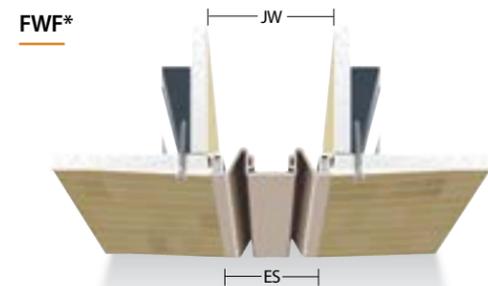

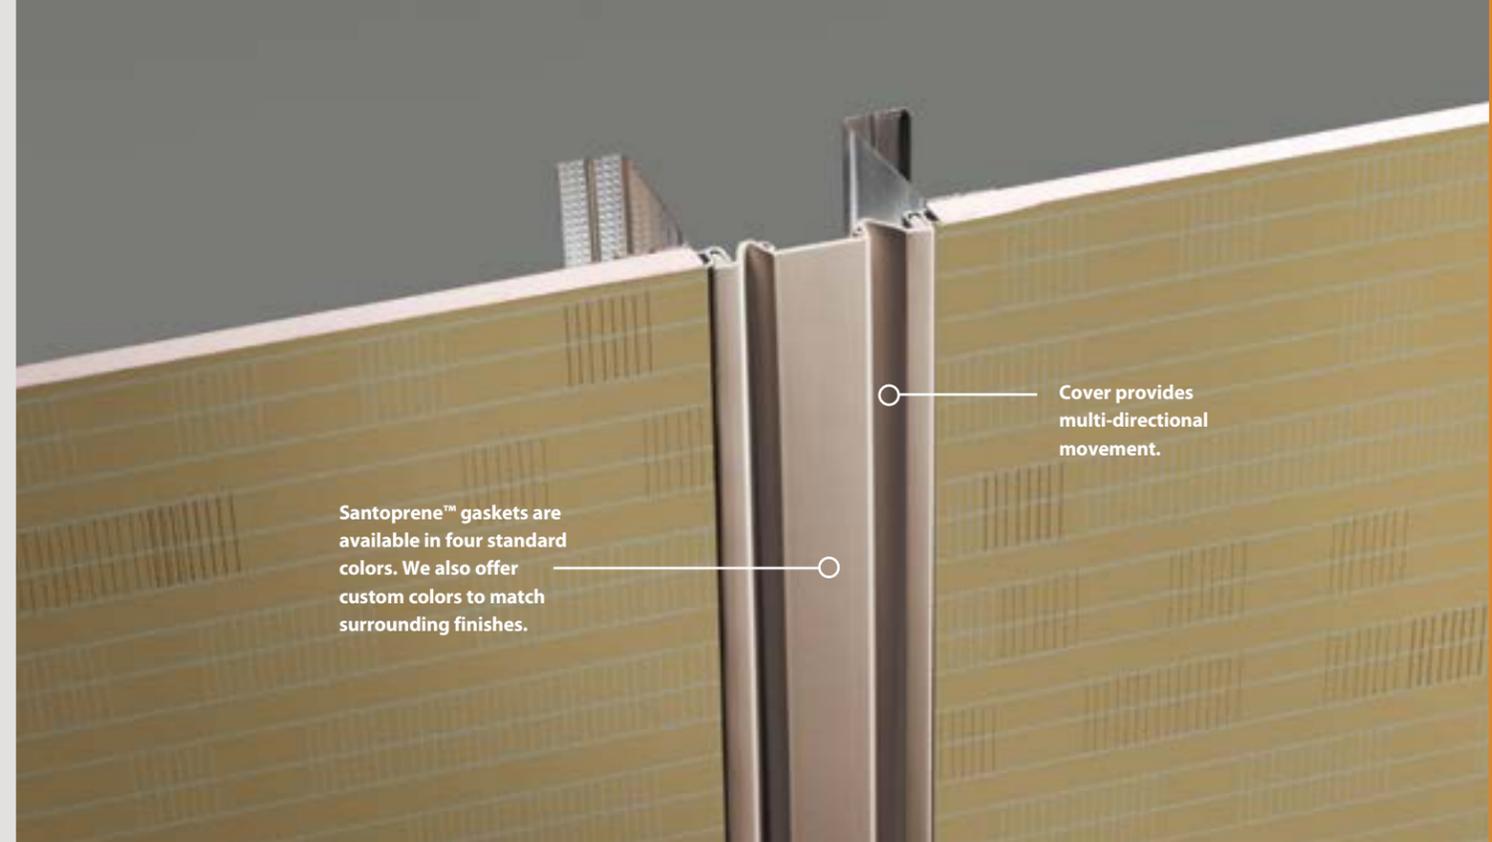

**Project:** De Young Museum  
**Architects:** Fong & Chan Architects | Herzog & de Meuron  
**Products:** XLS Exterior Wall Covers, MACC Multi-Axial Corridor Cover System

The project team utilized advanced strategies to design the DeYoung Museum, located five miles from the San Andreas Fault. The MACC systems allow the corridors on the base isolated building to move up to 42" in any direction during a seismic event. The 60" wide custom covers are filled with the same unique, copper cladding as the rest of the building, which provides a seamless appearance to the façade.

For comprehensive information on these products, visit [www.c-sgroup.com/ejc](http://www.c-sgroup.com/ejc).

# Flush Thinline Wall and Ceiling Covers 1"-10"

These flush gasketed wall and ceiling covers are designed to align with our flush gasketed floor covers. These covers are suitable for most wall and ceiling finishes and are unobtrusive.

Optional ribbed gaskets provide greater movement (models FWS, FCS and HC).

ZBSM and ZB have the same model data. PDS and PDA have the same model data. For odd and larger sized joints, call 800.233.8493 or visit [www.c-sgroup.com/ejc](http://www.c-sgroup.com/ejc).

For comprehensive information on these products, visit [www.c-sgroup.com/ejc](http://www.c-sgroup.com/ejc).

# No matter what joint cover you need, we've got the right fire barrier.

When an expansion or seismic joint passes through a fire-rated structure, it is necessary to maintain the fire integrity of that structure.

Maintaining the integrity of a two-inch wide joint is quite simple; however, a joint designed for seismic movement up to 24 inches becomes a more difficult proposition. **In general, the wider the joint, the more complex the fire barrier.** We have simplified our fire barrier for small joint sizes for easy installation and to maximize cost effectiveness. (See Reflex®.) It is critical to coordinate transitions between floor and wall fire barrier to properly rate the condition. Current building codes require fire barrier to limit the passing of heat and flame for two, three and sometimes four hours, as well as accommodate the dynamic movement for which the joint was designed. ASTM E 1966 and UL 2079 specify criteria for cycling a fire barrier 500 times prior to fire testing.

### UL TESTING

We test all our fire barrier at Underwriters Laboratory (UL) because they represent the most stringent and universally accepted testing authority. UL 2079 cycling tests are included.

### REFLEX® 1"-4"

Stainless steel foil drape with block insulation affords maximum economy in material and installation. Wall barriers require no stainless foil drape.

NOMINAL JOINT WIDTH	CS MODEL FLOORS	CS MODEL GYPSUM WALL	CS MODEL MASONRY WALL
1	RFX-1F	RFX-1W (GYP.)	RFX-1W (CONC)
	RFX-1F		RFX-1W (1 HR CONC)
2	RFX-2F	RFX-2W (GYP.)	RFX-2W (CONC)
	RFX-2F	RFX-2W (1 HR GYP.)	RFX-2W (1 HR CONC)
3	RFX-3F	RFX-3WC	RFX-3WC
4	RFX-4F	RFX-4WC	RFX-4WC

### MONOFLEX (OFX) 3"-20" & MULTIFLEX® (MFX) 3"-12"

Sandwiched layers of stainless steel foil and insulation contained in a stainless steel mesh. Multiflex should be used where lateral shear is required in floor applications having a 3"-12" joint width.

NOMINAL JOINT WIDTH	CS MODEL FLOORS	CS MODEL GYPSUM WALL	CS MODEL MASONRY WALL
3-20	OFX-3F-20F	OFX-3W-20W (GYP)	OFX-3W-20W (CONC)
3-12	MFX-3F-12F	OFX-3W-12W (GYP)	OFX-3W-12W (CONC)

### FB97 13" AND UP

Multiple drape configurations of stainless foil and insulation utilize air pockets for additional insulation performance. Sliding frame is available for 200% lateral shear applications in floors.

NOMINAL JOINT WIDTH	CS MODEL FLOORS	CS MODEL GYPSUM WALL	CS MODEL MASONRY WALL
13-24	FB97-13-24	FB97-13-24 (GYP)	FB97-13-24 (CONC)
25-36	FB97-25-36	NA	NA
13-24	FB97-13(LS)-24(LS)	NA	NA
25-36	FB97-25(LS)-36(LS)	NA	NA

LS designation indicates a special adaptation of the floor fire barrier to accommodate lateral shear movement. FB-97 wall fire barriers naturally provide lateral shear movement.

For comprehensive information on these products, visit [www.c-sgroup.com/ejc](http://www.c-sgroup.com/ejc).

Our pricing is all-inclusive.

**ALL OF THE FOLLOWING ARE INCLUDED IN OUR PRICE:**

Accurate quotes when you need them, how you need them

Complete shop drawings

A project manager to control the process from quote through installation

All code-compliant hardware required to mount covers properly to the building

Specialized equipment to help with installation

Staggered shipments to ensure materials arrive at the proper times

Remember to ask—**“What’s included?”**

**CS creates products that solve complex building challenges around the world:**

Acrovyn by Design®	Architectural Grilles + Vision Barriers	Expansion Joint Covers
Acrovyn® Doors	Architectural Louvers	Explosion + Pressure Relief Vents
Acrovyn® Wall Covering + Panels	Cubicle Curtains + Tracks	Fire + Smoke Vents
Acrovyn® Wall Protection	Entrance Mats + Grids	Sun Controls
